October 31, 1979

Mr. Lee Gronemeyer
Health Services Division
Radiation Control Program
P.O. Box 1788
Olympia, WA 98504

Dear Lee:

Attached you will find a memo to Mr. W. A. Humphrey outlining changes to the preoperational monitoring program for the proposed heap leach operation at our mine site. These changes are in response to a letter dated October 4, 1979 from the N.R.C. and are modifications to the original program submitted to the D.S.H.S. by Dawn on August 15, 1979. Copies of all three documents are enclosed.

It would be advantageous to Dawn to have the ground water monitoring wells drilled before winter conditions make access to the sites difficult. Therefore, Dawn respectfully requests that at least a partial approval of the preoperational monitoring program be granted (i.e. groundwater monitoring wells) as soon as possible. The remainder of the program can be easily modified whereas the wells can not be moved.

Yours truly,

DAWN MINING COMPANY

J. E. Thompson

DAWN MINING COMPANY
PO BOX 25
FORD WASHINGTON 99013

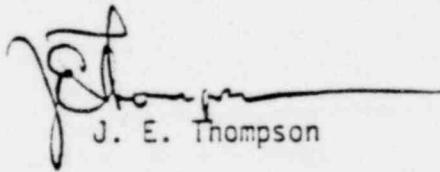

October 31, 1979

TO: W. A. Humphrey, Vice President Operations
FROM: J. E. Thompson, Resident Manager
Re: Preoperational Monitoring Program
Heap Leach Plant Site

The original preoperational monitoring program proposed in my memo to you dated August 15, 1979 has been modified at the request of the N.R.C. and the D.S.H.S. Please note the following changes:

- 1) Two additional ground water monitoring wells have been added. (No's 27 and 28). In addition the suggestion was made to document trace metal (eg. selenium, molybdenum, arsenic, etc.) concentrations in ground waters. This will be done on a quarterly basis.
- 2) The vegetation sampling sites have been moved so that all are downwind from the proposed operation.
- 3) Radon flux measurements will be made by traditional methods (charcoal canisters). Dawn does not have the manpower to conduct a quality assurance program to validate the Polonium 210 method originally proposed.
- 4) Additional monitoring has been provided around the proposed Pit 4 tailings disposal site. A radon gas monitoring station and a ground water monitoring well have been added.

In addition to the above, a third possible tailings disposal site has been identified i.e. Adit Pit. This site will be adequately monitored. As it is in close proximetry to Pit 3. The revised monitoring program is shown in Figures 1 through 13.

J. E. Thompson

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

OCT 1 1979

Docket No. 40-8746

Dawn Mining Company
ATTN: Mr. J. E. Thompson
Resident Manager
P. O. Box 25
Ford, Washington 99013

Gentlemen:

In response to your August 16, 1979, letter requesting our review and comments on your proposed preoperational monitoring program for a proposed heap leach operation at your Midnite Mine, we are happy to provide you with the comments contained in the enclosure to this letter. In general, your proposed program contains all of the essential elements of a comprehensive preoperational monitoring program. If you have any questions on these comments, please do not hesitate to call Mr. Greg Eadie or Mr. John Linehan of my staff (Tel. No. 301/427-4103).

In addition, thank you for your August 9, 1979, letter enclosing a copy of your application to the State of Washington Department of Social and Health Services for amendment of your mill license to authorize a pilot-scale heap leach testing program. Please note that the NRC will not take any specific licensing action on any amendments to your mill license, issued by the State of Washington, until after your mill license is renewed and your general license for tailings has been converted to a specific license by the NRC. In the interim, we will provide technical assistance on licensing actions as requested by the State of Washington and will be happy to answer any questions on proposed licensing actions you may have.

Sincerely,

Ross A. Scarano, Chief
Uranium Recovery Licensing Branch
Division of Waste Management

Enclosure: As stated

cc: Mr. Lee Gronemeyer (w/ encl)
