Attention: Mr. Walter P. Haass, Chief  
Quality Assurance Branch  
Division of Project Management

Subject: Revision of General Electric Licensing Topical Report,  
NEDO-11209-04A

Enclosed for your review are four copies of Revision 1 to the General Electric Licensing Topical Report, "Nuclear Energy Business Group BWR Quality Assurance Program Description," NEDO-11209-04A.

This revision affects sections 1, 2, 3, 4, 6, 7, 16, 17, & 18 of the text of NEDO-11209-04A and will also result in changes to the "Table of Contents" and the "List of Abbreviations."

As discussed with you in our meeting of October 19, 1979, in Bethesda, Maryland, this revision encompasses four basic categories of change:

- Revision of organizational charts and the text to correctly depict the Nuclear Energy Business Group (NEBG) organizational structure and assignment of responsibilities.
- Revision of Section 3, "Design Control," to more accurately describe current design control practices.
- Expansion of the scope of coverage to more completely describe General Electric activities at nuclear power plant sites.
- Editorial revisions to clarify the description of our quality assurance program.

As discussed in our October 19, 1979, meeting, none of the proposed revisions reflects a downgrading of the NEBG quality assurance program.

The convention used to identify the revisions to NEDO-11209-04A is a bar in the right or left hand margin accompanied by the numeral 1 to designate revision number 1.

Upon receiving your approval of this revision, it is planned to issue the topical report in loose-leaf form in accordance with my April 6, 1979, letter which received your approval on May 8, 1979.

A. Breed, Manager  
Quality Assurance Section
