

SEP 25 1979

DOCKET NO.: 40-2061  
FACILITY: Kerr-McGee West Chicago Site  
FROM: W. A. Nixon  
SUBJECT: MEETING TO DISCUSS KERR-MC GEE STABILIZATION PLAN FOR  
WEST CHICAGO SITE

A meeting was held on September 19, 1979, in the Region III offices to discuss with local, state and Federal representatives the Kerr-McGee stabilization plan for the West Chicago site. A list of attendees is attached.

Major comments obtained on the plan were as follows:

1. The analysis of alternatives is inadequate. More alternatives for off-site disposal should be considered and more detailed information on all alternatives presented.
2. The Kerr-McGee proposed plan for on site disposal does not meet criteria given in the draft GEIS on Uranium Milling for radon emissions from tailings piles or for cleanup of ground for release for unrestricted use.
3. Both state and local officials expressed their belief that cleanup of material from the 70-odd identified spots in West Chicago should be included in the Kerr-McGee plan.

Attendees at the meeting were requested to submit written comments within two weeks. ANL personnel will receive the comments and prepare them for transmittal to Kerr-McGee.

Representatives of the Illinois Environmental Protection Agency did not attend the meeting but will submit comments on the plan.
