U. S. Nuclear Regulatory Commission
Washington, DC 20555

Serial No. 875/101079A
LQA/JEE:shs

License No. NPF-4
Docket No. 50-338
50-339

Dear Mr. Eisenhut:

PROPOSED REVISION TO EMERGENCY PLAN
NORTH ANNA POWER STATION

In response to your letter of October 10, 1979, the regional meeting of August 24, 1979, and the review team site visit during the week of October 15, 1979, we have prepared a proposed revision to the North Anna Power Station Emergency Plan. This proposal has been developed using the latest guidance from the staff, and represents a comprehensive description of the company's responsibilities and capacity to respond to any emergency situation that may arise at the station.

This plan is designed to be compatible with the NRC concurred State and County Radiological Response Plans to provide for an overall response effort that meets the needs of the citizens of this state. We will continue to work with them for continued improvements, such as the early warning system which is still under development.

New agreement letters are included from all response agencies except the Spotsylvania County Administrator and the Spotsylvania Volunteer Fire Department which we anticipate receiving shortly.

The plan will be implemented 90 days following acceptance by your staff. This time is needed for preparation of new procedures and training of our personnel.

If you have any questions concerning this proposal, please contact James East at (804) 771-4322, who is ready to assist you.

A check for \$4,000.00 is attached to cover required review fees.

Very truly yours,

C. M. Stallings
Vice President-Power Supply
and Production Operations
