

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

File A42

NOV 18 1979

MEMORANDUM FOR: R. F. Fraley, Executive Director
Advisory Committee on Reactor Safeguards

FROM: S. H. Hanauer, Director
Unresolved Safety Issues Program

SUBJECT: STAFF RESOLUTION OF UNRESOLVED SAFETY ISSUE TASK A-42

The staff has issued NUREG-0313, Rev. 1, "Technical Report on Material Selection and Processing Guidelines for BWR Coolant Pressure Boundary Piping," which provides the staff's resolution of Unresolved Safety Issue Task A-42. Enclosed you will find 20 copies of this document and the October 26, 1979, Information Report from the Director, Office of NRR, to the Commissioners, that includes the staff's plans for obtaining public comments, final management approval, and implementation of these requirements.

This subject was most recently discussed with the ACRS Subcommittee on Metal Components on November 5, 1979.

The staff intends to request final management approval about January 31, 1980, following the public comment period. The Committee's comments and evaluation will be most helpful to us if it is received at a time consistent with that schedule. We will keep the Committee informed of all information developed or received during this period, and would be glad to furnish additional information and meet with the Committee or a subcommittee if desired.

Stephen H. Hanauer, Director
Unresolved Safety Issues Program
