

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

Docket No. 70-364

DEC 28 1979

APPLICANT: Babcock and Wilcox Company
Nuclear Materials Division

FACILITY: Parks Township, Pennsylvania

SUBJECT: SAFETY EVALUATION REPORT - BABCOCK AND WILCOX
REQUEST FOR RELIEF FROM LICENSE CONDITIONS 12 AND 37
TO LICENSE NUMBER SNM-414

Discussion:

License Conditions 12 and 37 for License Number SNM-414 commit B&W to modify by December 31, 1979 certain plant instrumentation and ventilation systems in accordance with their responses to our letter dated March 24, 1977 identifying areas of concern. In a letter dated December 10, 1979 B&W requested extension of the December 31, 1979 completion date for the modifications to a date at the end of March, 1980. B&W has stated that the delivery of certain components and materials has caused the delay. I have confirmed this with W. Kushner, I&E resident inspector at the B&W Pennsylvania Operations. This change will not affect the conclusions result in renewal of the license, and this action is considered an administrative amendment.
