Docket No. 50-320

Voss A. Moore, Assistant Director for LWRs, Group 2, L

TECH SPECS - FIRST ROUND QUESTION FOR THREE MILE ISLAND UNIT 2

Plant Name: Three Mile Island, Unit 2

Licensing Stage: Operating License

Docket Numbers: 50-320

Responsible Branch and Project Manager: LWR 2-2, B. Washburn

Technical Review Branch Involved: Electrical, Instrumentation and Control Systems Branch

Applicant's Response Date Necessary for Completion of Next Action

Planned on Project: November 22, 1974

Requested Completion Date: October 11, 1974

Description of Response: Question for Applicant

Review Status: Awaiting Information

The Electrical, Instrumentation and Control Systems Branch has completed its initial review of the Technical Specifications for the Three Mile Island Unit 2 Nuclear Generating Station. Our initial question as noted in the enclosure is that the applicant identify and justify any differences between the Technical Specifications provided for the Three Mile Island Unit 1 Generating Station and those provided for the Three Mile Island Unit 2 Generating Station. Our subsequent comments and questions will be provided after round two questions, i.e., during the drawing review.

222.0

ELECTRICAL, INSTRUMENTATION & CONTROL SYSTEMS222.1
(16.0)

Identify and justify any differences between the Technical Specifications provided for the Three Mile Island Unit 1 Nuclear Generating Station and the Technical Specifications provided for the Three Mile Island Unit 2 Nuclear Generating Station. All applicable sections of the Technical Specifications which relate to the instrumentation, controls or electrical power systems aspects of the design should be considered.
