SUBJECT: SUGGESTED REALIGNMENT IN SENIOR NRR PERSONNEL AT TMI

We have maneuvered ourselves into working a nominal 15-hour day (actually 16-17) every other day, with the alternate day "only" a nominal 12-hour shift. This is unacceptable. The perceived fatigue is an omen of an ill-considered decision process. In addition, we have a support team in Bethesda that is relatively new (especially Aycock and Miraglia). We have a number of safety decisions to make on going to natural circulation. This needs management and coordination by someone well-versed in the TMI situation.

What I propose is the following:

- Ross to leave today for Bethesda to manage all safety analysis there - including questions the duty teams headed by Aycock and Miraglia. Mattson and Stello to work 7AM - 7PM only. Vollmer to work 7PM - 7AM.
- Ross can come back Friday or Saturday to fill in the Easter period, if needed, consistent with safety analysis needs.
- Novak to continue as team leader on systems review.
- Vollmer could be replaced on the night shift by Don Davis, say Tuesday, if Davis comes on up now. This would restore 2 A/Ds to DOR.
