STORAGE OF SPENT CHARCOAL ADSORBERS

The licensee is presently constructing steel boxes large enough to hold 8 - 10 spent carbon trap. TMI plans to store the boxes on the 328 level in the auxiliary building and wait for decay before removing the charcoal and disposing of this waste in 55 gallon drums and refilling the cell with new carbon for reuse in the AB/FH buildings. Before storing them in this area I requested that they check to make sure that the area has a sprinkler system. The spent resins contained in 55 gallon drums will then be shipped to Barnwell or Richland.
