MEMORANDUM FOR: B. H. Grier, Director, Office of Inspection and Enforcement, Region I

THRU: James P. O'Reilly, Director, Office of Inspection and Enforcement, Region II *JM 1/22*

FROM: Jack E. Ouzts, Reactor Inspector, Reactor Projects Section No. 1, RONS Branch, Region II

SUBJECT: SUMMARY OF ACTIVITIES WHILE AT THREE MILE ISLAND

I arrived at Three Mile Island at about 9:00 p.m. on the evening of April 11 and departed at about 6:00p.m. on April 26, 1979. Normal times on duty were from 7:00 a.m. to 5:00p.m. each day, including Saturdays and Sundays. During this period I was on duty a total of 97 regular hours and 52 irregular hours onsite.

Activities performed while at the site included reviews of Metropolitan Edison prepared operating and emergency procedures along with personnel from NRR. Time was also spent in the Control Room observing operations activities and checking plant status. Operating personnel were observed to be alert and responded knowledgeably to inquiries concerning the status of activities in progress.

In the review of procedures the turn-around-time in many cases was too short to adequately review them. Also, changes were made to the procedures after the NRC review, that required subsequent NRC review prior to signoff.

Communications onsite could have been improved to better inform NRC personnel on plant status and planned modifications that would require changes in operating and emergency procedures. Also, the NRC organizational chart showing how the various NRC groups interfaced, and the activities performed by each would have been helpful to the newcomer.
