

Sheldon J. Wolfe -

I am a 20 year old housewife - with a 1 year old son - and a husband.

We are against "Nuclear power" because of the unsolvable problems with this science (industry).

Plutonium has a 1/2 life of 24,000 years. I don't think it is feasible to believe that we can expect lead proof containers - (without incident), such the amount that will soon be produced in the U.S.A alone. One lb. is toxic enough for 700 Million people. What do you plan to do? Storage facilities have already leaked before - like Shippingport P.A. - or like Kings Falls.

Radiation fallout from a nuclear power plant could contaminate land, food, people - cause birth defects, genetic disorders - cancer etc. Why are we investing so much money into such a $\text{\textcircled{D}}$ wasteful technology?

Solar power is a clean alternative - along with wind etc.

If solar were perfected a little

POOR ORIGINAL

now I'm sure it could meet all heating needs. That alone could cut large consumption down low enough where we wouldn't need nuclear. It now supplies 15% of the electric needs. Best in Oklahoma - you can get a solar system to heat up to 70% of ones needs.

It should be mandatory all new housing be built very conservative

We in Oklahoma do not want Black Fox Nuclear plant, yet it is being shoved down our throats. Release the "Red Report" for the general public.

There were many voices at the protest in Washington. The public does not want nuclear power. Money is not the most important issue - what about our health and the health of all mankind. What we do now may be irreversible.

Angry - we are against nuclear power
Sincerely

Mrs C. Hufford
