Dear Dr. Cooper:

The University Radiation Safety Committee wishes to resolve a minor discrepancy in the definition of an authorized user of radioactive materials at the University and to gain latitude in the designation of non-faculty authorized users.

The Committee proposes that the definitions in Section 1.3 and Appendix F of the University Radiation Safety Manual, submitted in support of the application, dated August 4, 1978, for License No. 34-11912-03 be amended to read, in part, "An authorized user is a University employee who is fully affiliated with an academic department..." in the existing context and with other provisions remaining unchanged.

The Committee has concluded that this change will afford superior control of radioactive materials in certain instances that had not previously been anticipated without alteration of the fundamental responsibility of the Committee to review the credentials of authorized users.

Please contact either myself at (513) 873-2371 or Dr. Bruce T. Austin, University Radiation Safety Officer, at (513) 767-7324 (x378) or 873-2169 should you have any questions pertaining to this matter.

Sincerely,

Adrian V. Rake
