

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

JUL 11 1979

Dr. Richard E. Webb  
2858 111 Street  
Toledo, Ohio 43611

Dear Dr. Webb:

In response to your letter of June 12, 1979, I am enclosing a letter from Dr. Richard Denning of Battelle Columbus Laboratories which summarizes work done in connection with contingency planning at IMI-2 using the MARCH and CORRAL codes. This work deals with containment response should hydrogen combustion and rapid steam generation owing to vessel melt-through occur under various conditions. This is the only report we have been able to identify that matches your description.

I understand the information you requested of Mr. Thomas Novak has been sent to you under separate cover.

Sincerely,

A handwritten signature in dark ink, appearing to read "Roger J. Mattson".

Roger J. Mattson, Director  
Division of Systems Safety  
Office of Nuclear Reactor Regulation

Enclosure:  
As stated
