Re: SG-79-207

June 5, 1979

William J. Dircks, Director
Office of Nuclear Material
Safety and Safeguards
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attention: Mr. George McCorkle, Chief
Physical Security Licensing Branch

Subject: SECURITY PERSONNEL TRAINING AND QUALIFICATION PLAN

Reference: Letter George W. McCorkle to General Electric Company
dated May 30, 1979.

Dear Mr. McCorkle:

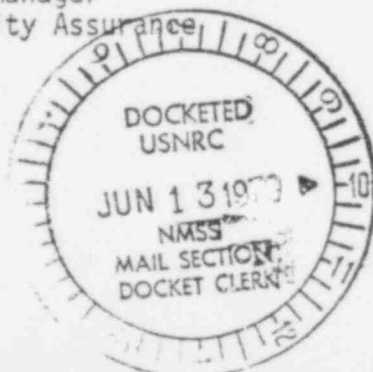

In answer to the referenced letter, I wish to state that any additional effort on the plan would be a waste of resources. The plan as written was provided to you only to document our efforts so they would not be lost in the event GE-VNC does not divest itself of nuclear materials as agreed in January of this year. By having the plan drafted, we could respond in a much shorter time period. To refine the plan to an acceptance level is unnecessary because SNM inventories at VNC will be below 5 kg. prior to the agreed to date of August 31, 1979.

Please be aware that all available resources are applied to maintaining compliance during this period of inventory reduction. It is not prudent to do otherwise. Therefore, please be advised my intended course of action does not include revision to the security personnel training plan.

Sincerely,

R. A. Moschner, Acting Manager
Nuclear Safety and Quality Assurance
