UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

JUN 27 1979

DOCKET NOS: 50-382 and 50-383  
APPLICANT: Detroit Edison Company  
FACILITY: Greenwood Energy Center, Unit Nos. 2 and 3  
SUBJECT: SUMMARY OF MEETING HELD JULY 16, 1979, TO DISCUSS DETROIT  
EDISON'S SITE SELECTION PROCESS FOR GREENWOOD UNITS 2 AND 3

A meeting was requested by the applicant to discuss our information requirements on alternative sites for the Greenwood CP review. The staff issued an FES in 1974, but the applicant subsequently suspended licensing effort on the units. Now the applicant's licensing effort has been resumed, and the staff will request additional information on alternative sites.

The attendance list is enclosed.

The first topic discussed was the timing of the environmental review. R. Ballard indicated that the staff is prepared to proceed with at least the nonradiological portion of the environmental review without waiting for the resumption of the safety review.

Then the staff's information requirements for alternative site reviews were discussed in the context of the Greenwood review. More justification is required for limiting the region of interest to the "thumb" region of Michigan. The Fermi site should be considered as a potential site for the Greenwood units, and a once-through-cooling alternative in a well-selected location should be considered as well.

A decision has not been made whether Detroit Edison's licensing effort will be suspended pending the reactivation of the safety review. The staff review will not proceed until this decision is made.
