Docket Nos. 50-445
50-446

COMANCHE PEAK STEAM ELECTRIC STATION
1981-83 2300 MW INSTALLATION
UNIT NO. 1 REACTOR VESSEL NOZZLE
WELD METAL DEFECTS
FILE NO. 10110

Dear Mr. Seidle:

On January 26, 1979, we verbally informed your Mr. W. A. Crossman of apparent weld metal defects in the shop weld between the Unit No. 1 reactor pressure vessel hot leg nozzle "C" and its safe end that we were evaluating as "potentially" reportable within the definition of 10 CFR 50.55 (e). We have completed our investigation and have concluded that the matter is not reportable under 10 CFR 50.55 (e). Records supporting this determination are available for your Inspector's review at the CPSES site.

If you have any further questions, please advise.

Very truly yours,

R. J. Gary
