

DOCKET NUMBER  
PROPOSED RULE PR-2(44FR23089)

May 22, 1979  
L-79-133

NRC PUBLIC DOCUMENT ROOM

Mr. Samuel J. Chilk  
Secretary of the Commission  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Attention: Docketing and Service Branch

Dear Mr. Chilk:

Re: Proposed Rule to Permi. the Use of New Staff  
Procedures on a Trial Basis for the System and  
Site Safety Portions of Selected Nuclear Power  
Plant Construction Permit Applications  
(44 F.R.23089)

Florida Power and Light Company has reviewed the referenced proposal and agrees that an accelerated schedule for S.E.R. preparation is desirable; however, it is unclear how an extra 30 days of predocketing review can shorten S.E.R. preparation by 12 months. If such a reduction is practical the regulations should be amended further to establish a 6 month deadline for the S.E.R. Without such an amendment it is uncertain that the time for S.E.R. evaluation can be reduced substantially.

Thank you for the opportunity to submit these comments.

Sincerely,

Robert E. Uhrig  
Vice President  
Advanced Systems & Technology
