EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 A control room operator noted that the static inverter power supply for
0 3 one containment vacuum relief loop was de-energized and a blown input fuse
0 4 was found. The fuse was replaced and the unit restored to operability on
0 5 6/16/79. Bench checking completed on 7/10/79 did not reveal any other defect.
0 6 The redundant loop was operable and no hazard occurred. Previous failures
0 7 reported in RO-78-40 and RO-79-15. Reportable per technical specification
0 8 6.9.2.b.(2)

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Based on previous experience with the same type inverter, it is hypothesized
1 1 that the lightly loaded inverter should have a dummy load to preclude failure
1 2 on input voltage transients. The equipment is being checked routinely until
1 3 this modification is completed. The load addition is planned prior to plant
1 4 startup.
