

June 4, 1979

Sir:

Maine Yankee at Escamoose (as well as all other nuclear power plants in this country) must be shut down completely and forever. The evidence is overwhelmingly clear; there is no safe means of generating atomic power. (And how can any individual or group conscience bear the guilt of knowingly subjecting thousands of future generations to the dangers of nuclear wastes? The greed of utilities and the governments that allow them to assault us must be stopped. Why must dollars and cents always come before people and sense?

There are other practical alternatives, and anyone who denies that fact is deceiving the public. I implore you to use any feasible means to help shut down all nuclear power plants at the earliest possible date.
