TOPICAL REPORT - CPC-1-A - CONSUMERS POWER COMPANY
QUALITY ASSURANCE PROGRAM - ORGANIZATIONAL CHANGES

Consumers Power Company elected two new Vice-Presidents on July 11, 1979 as part of an energy supply organizational realignment. The organizational changes have been implemented because of the increased emphasis placed on nuclear power in our Company and the industry and to recognize the added impact of all major generating plants and integrated system operations on the overall success of the Company.

As of July 11, 1979, the Production and Transmission Department, as related to nuclear plant operations, has been changed to be called Nuclear Operations. Thus in CPC-1A, all uses of Production and Transmission (P&T) should be changed to Nuclear Operations (NO). Nuclear Operations now is headed by a Vice-President solely concerned with nuclear powered electric generation facilities.

Wherever the term Plant Superintendent is used, it should be changed to "General Manager/Plant Superintendent".

Several Departments formerly reporting to the Vice-President, Production & Transmission now report to the Vice-Presidents Nuclear and Fossil Operations. However, the functions of these departments within the scope of the Quality Assurance Program for Operations have not changed as of this time, and the commitment to adhere to program requirements has not been diluted. Revised draft organization charts reflecting these changes are attached, and will become part of Policy 1, (see attachments A and B).

These changes will be made to the text of CPC-1A, and submitted to NRC by October 15, 1979 for information. This letter constitutes submittal of notice of organizational change within thirty (30) days as required by Policy 6, and further commits to submittal of revised pages.
