

NRC Annual Assessment for Davis-Besse

NRC 2018 Assessment Summary

- The Licensee, FirstEnergy Nuclear Operating Company, operated the station safely and in a manner that preserved the public health and safety and protected the environment
- Davis-Besse was in the Regulatory Response Column (Column 2) of the NRC's Reactor Oversight Process (ROP) Action Matrix for three quarters of 2018 and transitioned back to the Licensee Response Column (Column 1) in fourth quarter 2018.
- The NRC performed a 95001 supplemental inspection in response to a White finding from late 2017.
- NRC plans baseline inspections for 2019
- >5000 total inspection hours expended by NRC in 2018
- 2 resident inspectors on site conducting independent inspections throughout the plant – inspection reports are publicly available
- Team Inspections included:
 - Inspection of containment and reactor coolant boundary components during outages
 - Observing licensed operator requalification tests
 - In-depth safety systems inspection to ensure components are within their design basis
