Dr. Joseph Hendrie
Chairman
Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sir:

Needless to say, the events that have transpired over the last week have promoted extreme concern and anxiety amidst the residents of Middletown, Pa., and surrounding areas, as well as for all those living in the U.S. and in fact, the world.

Indeed, it is not a matter of ignorance which has caused concern about nuclear energy, rather the education of the general public urging us to petition you and other offices for a moratorium on all new construction while a thorough review of existing structures is completed. We also request that the disposal of spent nuclear rods and other waste be more carefully thought out than in the past.

Our concern stems from the reality that this "accident" was not supposed to have occurred. Furthermore, the tremendous amount of conflicting opinions by the "experts" confounded and frightened residents in and around the Three Mile Island plant.

Turning back the clock is not possible, however, future plants must be guaranteed by an independent agency as far as safety is concerned and must be located in desolate areas. Population density standards must be of the highest priority.

Our futures depend upon intelligent planning regarding energy, and our lives as well as the lives of future generations depend upon action taken now.

Your reponse to the undersigned is requested.

Very truly yours,
