Re: Pacific Gas and Electric Company,  
Stanislaus Nuclear Project, Unit  
No. 1, NRC Docket No. P-564A

Dear Rich:

Attached is a list of the green-dotted document boxes reviewed by the NRC Staff to date showing the number of pages retained by the Staff. As I told you, in the future, each box returned to PG&E will contain a statement of the number of pages retained by the Staff.

Very truly yours,

Jack R. Goldberg  
Counsel for NRC Staff

JUL 31 1979

MEMORANDUM FOR: R. Reid, Chief, Operating Reactors Branch #4, Division  
of Operating Reactors

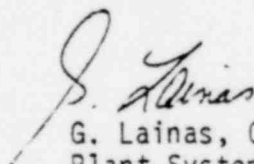

FROM: G. Lainas, Chief, Plant Systems Branch, Division of  
Operating Reactors

SUBJECT: SAFETY EVALUATION OF SPENT FUEL STORAGE RACK

Plant Name: Crystal River, Unit 3  
Docket No.: 50-302  
TAC No.: 7468  
Project Manager: C. Nelson  
Status: Complete

Enclosed is the Plant Systems Branch input to the Safety Evaluation Report for the Florida Power Corporations (FPC) proposed modification to the spent fuel storage racks for Crystal River Unit #3.

We have reviewed the issues of criticality, cooling, rack installation, and fuel handling as they are discussed in the licensee's submittal supporting its proposed amendment to the facility's operating license. We find FPC's application for the license amendment acceptable with respect to the above listed issues, provided that the uranium-235 loading in fuel assemblies that are to be placed in the pool is limited to the amount established as acceptable in this report and the neutron attenuation test, which is described in this report, is satisfactorily performed at the Crystal River site.

  
G. Lainas, Chief  
Plant Systems Branch  
Division of Operating Reactors
