September 7, 1979

Mr. Boyce H. Grier, Director
Office of Inspection and Enforcement
Region I
United States Nuclear Regulatory Commission
631 Park Avenue
King of Prussia, PA 19406

RE: Peach Bottom Unit No. 3 - Preservice Inspection

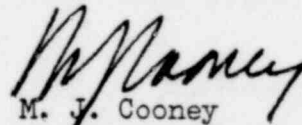

REFERENCE: Technical Specification 6.9.3.b, 4.6.G, Table 4.6.1

Dear Mr. Grier:

In accordance with the referenced technical specifications, preservice inspection was completed during the June 2 to June 11, 1979, mini-outage. Enclosed are three copies of the Preservice Inspection Report which summarizes the examinations performed. No reportable indications were observed during this inspection.

This report has been reviewed by the Plant Operation Review Committee, the Philadelphia Electric Company Senior Engineer - Inservice Inspection Section, and the Hartford Steam Boiler Authorized Code Inspector. The results of these reviews indicate that the PSI requirements have been met satisfactorily. In addition to the Preservice Inspection Report, a detailed data package has been assembled which supports this examination. This package is retained by Philadelphia Electric Company and is available for your review.

Very truly yours,

M. J. Cooney
Superintendent-Nuclear
Generation Division
