

Supplementary Information

Report No.: 50-302/077-03L-0

Facility: Crystal River Unit #3

Report Date: 4 September 1979

Occurrence Date: 16 August 1979

Identification of Occurrence:

The Dose Equivalent I-131 was greater than 1.0 microcurie per gram of primary coolant contrary to Technical Specification 3.4.8.

Conditions Prior to Occurrence:

Mode 3 hot standby.

Description of Occurrence:

At 0509, following a Reactor trip, Chem/Rad sampling revealed that the Dose Equivalent I-131 exceeded 1.0 microcurie per gram of primary coolant. Dose Equivalent I-131 was 2.059 microcuries per gram. Action statement of 3.4.8 was entered and the four hour sampling frequency was initiated. The Dose Equivalent I-131 returned to within acceptable limits at 0500 on 18 August 1979.

Designation of Apparent Cause:

This event was due to an expected transient spike following a Reactor trip and known leaking fuel pins.

Analysis of Occurrence:

There was no safety hazard to the plant or general public as sampling demonstrated reducing levels of DEI-131. The transient was within the capabilities of the plant purification system.

Corrective Action:

No corrective action deemed necessary as Reactor Coolant purification returned the DEI-131 to within acceptable limits.

Failure Data:

This is the twelfth occurrence reported under this Technical Specification.

Reactor Power History of Prior

Forty-eight Hours

Fuel Burnup by Core Region

Item 2

Event Date: 16 August 1979

937319

Item 2

The burnup was calculated at 11.7 EFPD for the three (3) enrichment regions.

<u>REGION</u>	<u>NUMBER of FA</u>	<u>BURNUP</u>
A		MWD/MTU
B	61	15,568 MWD/MTU
C	60	10,517 MWD/MTU
D	56	297 MWD/MTU

Time Duration When DEI-131 Exceeded 1.0  
μ Ci/gram and I-131 Analysis Results

Item 5

Event Date: 16 August 1979

937325

Item 5

As per Technical Specification 3.4.8

The four (4) hour sampling frequency was initiated at 0509 on 16 August 1979 and the Dose Equivalent I-131 was 2.059 microcuries per gram. The four (4) hour sampling frequency was terminated at 1415, on 18 August 1979 when the DEI-131 was determined to be .3685 microcuries per gram. DEI-131 was  $\leq 1$   $\mu$  Ci/gram at 0500 on 18 August 1979 when the sample results were .7437  $\mu$  Ci/gram.
