OCTOBER 18 1979

Docket No. 50-293

FACILITY: Pilgrim Nuclear Power Station

LICENSEE: Boston Edison Company

SUBJECT: MEETING SUMMARY

An Emergency Preparedness fact finding and data collection meeting was held with representatives from Boston Edison Company (BECo) at the Pilgrim Nuclear Station (PNPS) on September 25, 1979. The purpose of this session was to acquaint the NRC staff review team members with special local features and site emergency facilities for the PNPS Unit 1 Emergency Plan. The NRC staff then met with the licensee in public session on September 26, 1979 at Memorial Mall in Plymouth, Massachusetts to discuss the results of a preliminary review of the PNPS Unit 1 Emergency Plan against current criteria. The purpose of this meeting was to openly discuss the NRC criteria that are now being employed in the NRC's effort to upgrade emergency planning for all operating reactors. The public was invited to observe these proceedings. Approximately 20 people were in attendance as observers. A list of meeting participants is included as enclosure 1.

On September 27, 1979 the NRC staff met in public session with state and local authorities responsible for coordination and implementation of protective actions. The purpose of this meeting was to discuss with the state and local authorities the NRC concepts of emergency operations. The public was also invited to observe these proceedings. Approximately 30 people were in attendance as observers. A list of meeting participants is included as enclosure 2.

A period from 1 to 2 P.M. was scheduled on September 27, 1979 to hear comments from the public on the subject of emergency planning for the Pilgrim Station. Approximately 40 people from the general public attended this session, with at least 10 of them contributing a statement for consideration by the staff.

The staff requested that the licensee submit a revised emergency plan incorporating the improvements discussed at the meeting within five (5) weeks of the conclusion of the meeting. BECo committed to review the staff criteria within the next 10 days, and submit a revised plan incorporating appropriate changes within five (5) weeks. It was recognized that the submittal would not be completely responsive, since some of the details of the criteria have not been fully developed.

OCTOBER 16 1979

Many of the comments received by the staff during the public comment period appeared to be from persons who were not in attendance during the previous sessions, but who were interested in closing down the Pilgrim Station on the premise that nuclear power is intrinsically unsafe. Some of the issues voiced included:

- costs of alert system - who pays?
- lack of public education
- 10 mile plan adequacy (Cape Cod)
- local notification
- logistics of evacuation

At the conclusion of the meeting, the staff agreed to forward the questions on the PIPS Unit 1 Emergency Plan to BECo for formal consideration. BECo stated that a best effort would be expended in developing a revised emergency plan to address the staff's concerns.
