

July 2, 1977

Dr. Harold Denton
Director, Office of Nuclear
Reactor Regulation
Nuclear Regulatory Commission
Washington, D.C. 20585

Dear Mr. Denton,

In a recent letter to the Governor of the state of New Hampshire, I am writing concerning the safety aspects of the Seabrook Nuclear Power Plant. The evacuation issue in particular is one area that causes much concern. It is evidenced by all of the incidents at Three Mile Island, and in the March 25, 1977 report by the General Accounting Office on preparedness of utilities and communities to deal with nuclear facility accidents, there remains much doubt in the evacuation plans for nuclear power plants.

As I understand it, the Nuclear Service proposed to currently permissible for decommission of residents of evacuation plans for a 1.07 mile radius from the plant site. This is not an adequate review because of the fact this plan does not cover the heavily populated areas of the seacoast, such as Hampton Beach, which is about half-to-mile people during the summer months. There is no possible notification or warning and tested. In effect those people could be evacuated and forced for an early ordination.

The drawing up of an evacuation plan--a plan which should and must concern itself with public health, safety, and welfare--must rest in the hands of utility service companies and the Nuclear Regulatory Commission, and until they are able to prove that the safety of such a plan exists, construction should be stopped. I support the actions of the Seabrook Anti Pollution Committee to request such a construction stoppage until this matter is resolved to the satisfaction of the people of the state of New Hampshire.

Yours very truly,

Antonio Santuccio
