1 During surveillance testing of O<sub>2</sub> analyzer primary containment isolation  
 2 valves, two valves, SV2671A and SV2671B failed to close. Redundent  
 3 isolation valves were operable. In accordance with TS 3.7.D.2, the  
 4 manual isolation valves in series with the inoperable isolation valves  
 5 were blocked closed until repairs were completed. Five sample points  
 6 remained operable for containment oxygen monitoring. Previous occur-  
 7 rences were LERs 2-78-45/3L, 2-79-19/3L, and 2/79-30/3L.

1 Atkomatic 1/2" solenoid valves failed to close due to binding of the  
 2 piston in the valve body. Valve internals were rebuilt. Surveillance  
 3 tests were successfully performed and the valves were placed into  
 4 operation.
