Docket No. 50-213
ETS-NR/50-213/78-16

Dear Mr. Grier:

Pursuant to Connecticut Yankee Environmental Technical Specifications (ETS), Section 3.1.1.3, Connecticut Yankee Atomic Power Company hereby forwards the following report regarding fish impingement overruns.

During power operations with four main circulators running, an estimated 39 bluegill, *Lepomis macrochirus*, length category 3-6", were impinged during July of 1978, exceeding the monthly limit of 25 as established by ETS Table 3.1-1.

There was no apparent cause for this occurrence which could be related to changes in plant operations.

The inadvertent delay in submittal of the letter as required by ETS section 5.6.2.a.2 resulted from a clerical error comparing estimated monthly totals against the fish impingement report limits established by ETS Table 3.1-1. It is felt, however, that this estimated impingement total for July is small and does not represent a significant environmental impact.

Very truly yours,

R. H. Graves
Station Superintendent
