Mr. Jos. M. Hendrie, Chairman
Nuclear Regulatory Commission
Washington DC 20555

Dear Mr. Hendrie,

Would you please explain why nuclear workers receive higher radiation doses? I have the notice that says the NRC may reduce their present levels. But I want to know why the higher levels were set in the first place.

I can understand you may have to refer to regulations now in force and I will appreciate such a list. However, considering your long service and your present position I feel you must be qualified to give me brief, non technical reasons why nuclear workers need to have higher radiation levels.

I look forward to your reply and thank you for your attention and co-operation.

Very truly yours,

Emma Sasso
