

THREE MILE ISLAND NUCLEAR STATION -- DOCKET NO. 50-289

Supplementary Testimony on
Cost of Containment Repouring

By

Darrel A. Nash

Contention 10

"The extent to which the NEPA review concerning cost-benefit analysis and alternatives may not be complete in that the following point(s) have not been fully analyzed or included:

(d) The cost of containment repouring"

The Applicant has provided information that the cost to repair the Three Mile Island Unit 1 containment ring girder was approximately \$3 million. I believe this figure is essentially correct. It was not included in the cost benefit analysis because the analysis was made prior to the incurrence of these costs. Since its magnitude is a low percentage of total capital costs, it does not change the conclusions of the cost benefit analysis.
