Murray, Utah 84107

Dear Sir:

Why is it that we cannot use available energy and put General Public Utilities TMI Unit 1, the undamaged reactor at Three Mile Island, into service. Any other nation in the world would not waste this valuable commodity they would put this energy to good use. Here in America it is always wait and see, or never make a decision.

In times as these today, it takes good common sense decisions made swiftly to keep ahead of the times. The old adverb "He Who Hesitate Is Lost" is more true now then ever. Let's move ahead, please do not let the minorities dictate the terms when this country is based upon majority rule.

Please try to get this reactor into service without all the red tape and slow downs, let's keep America as independent as possible.

Sincerely yours

Fred S. Bailey
