Re: 3 Mile Island Nuclear Power Station, Susquehanna River, Ament (1) (7-21-67), Londonderry Township, Dauphin County, Pennsylvania

Dear Sir:

I am the owner of a residential property fronting on the Susquehanna River in the Borough of Goldsboro, York County, Pa.

I understand that a nuclear station is being planned by the Metropolitan Edison Company on 3 Mile Island in the Susquehanna River, opposite the Borough, and that the installation is to be approved by the Atomic Energy Commission.

The Susquehanna River, at this location, has, already, been dammed by the Metropolitan Edison Company and the York Haven Mill Company. The effect of the dam has been to increase high water elevations up river, which are at the critical stage during periods of flooding and high water and periods of jamming of ice.

It is hoped that in the new construction that no further deminution of the flood plain of the river by construction of dykes, fills or other obstructions in the bed of the river is contemplated. Otherwise, I feel that the residences and land now subject to occasional or minor flooding will become more severely flooded, because of the reduced area of the flood plain.

I have discussed this probability with a group of my neighbors, who have residences in the area subject to flooding under current conditions, and they are aprehensive of the effect of the proposed programme.

Very truly yours,

William B. Whittock
