Chairman Joseph Hendrie
Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Hendrie:

I'm writing regarding the Diablo Canyon PG and E Plant nearing completion in San Luis Obispo, California. I urge you to prohibit permanently the opening of this plant. Its proximity to an earthquake fault makes it utterly unsafe, regardless of how many precautions are taken.

Please see that the Diablo Canyon plant never opens, so that Southern Californians can look towards the future without dread.

Sincerely,

Janice Kline

Joseph Hendrie, Chairman NRC

Dear Mr Hendrie,

What is your position re the Diablo Canyon nuclear power plant? You know, I am sure, that it is only $2 \frac{1}{2}$ miles from the Hosgri fault, which govt. geologists admit is capable of an earthquake 10 times stronger than Diablo is designed to withstand. (Will retro-fitting ever make it safe?)

My opinion is that Diablo should never be allowed to open.

Sincerely,

Harold Waterhouse
