**POOR ORIGINAL**

Dear Mr. Wolfe,

My husband and I are in our early twenties and we have bought a house and are raising a family in the small town of Guy, Texas. After reading an article in the Fort Bend Suburbia-Reporter (Wed. May 2, 1979) I have become extremely concerned about the proposed Nuclear Power Facility at Allen's Creek less than 50 miles from here. I remember studying about Nuclear Power in my Honors Chemistry class and the difference between Nuclear Power Reactors and Nuclear type bombs but still no one can convince me that Nuclear Power Plants are safe from foreign attack or sabotage or as we recently experienced from uncontrollable accidents. I also feel that at the present time next page

nosatisfactory (to me) method of disposing
 of nuclear waste is available. If this
 plant is to be allowed to be built
 then at least it can be improved upon.
 The Allen's Creek facility "is expected
 to emit 36,000 curies per year of
 radioactive material." This is compared
 to 1,500 curies per year of radioactive ^(at the Scout Texas Plant)
 material. I drink water from an underground
 well (as we all do in this area) and again
 our home is within 50 miles of the
 proposed Allen's Creek facility. Such a
 "dirty" plant can only harm my family
 it would seem. We can't afford to move
 and I don't see what right Houston
 Lighting & Power has to increase the risk
 of Cancer in my family or in the
 whole Houston Area.

POOR ORIGINAL

I would like to request an environmental
 impact statement for the proposed facility
 at Allen's Creek and be made a full party
 to the Allen's Creek construction permit
 proceedings. And no, I'm not sitting here
 crying no nuclear plants but let me have all
 the comforts energy affords. We have

no air conditioning or central heat
and regarding the present shortage
and cost of energy I doubt we'll
install any. Thank-you for your time.

Mrs. Karen Stade
