Gentlemen:

Enclosed is Byproduct Material License No. 37-07855-02.

Please note that this license does not authorize the possession and use of the cesium 137 or americium-beryllium sources. In order to consider amending this license to authorize these byproduct materials, we need a more detailed description of the activities involving these sources, including (a) description of the area(s) or room(s) in which the sources will be used, (b) evaluation of external radiation in unrestricted areas outside of the room(s) or area(s) where sources are being used, (c) description of the procedures for setting up instruments, activating calibrator and reading instruments, and (d) provisions for controlling access to area(s) or room(s) where sources are being used. Also, you need to specify the manufacturer and model number for the cesium 137 sources. If these sources have not had a safety evaluation performed either by the Commission or an Agreement State, such an evaluation will need to be performed prior to licensing their possession and use. The information required to perform such an evaluation is outlined in Enclosure 1 to this letter.

Our records do not indicate that the Technical Operations Model 682 calibrator or the Victoreen Instrument Model 64-764 calibrator have had a safety evaluation performed either by the Commission or an Agreement
