EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
02 On 12/14/79, the plant effluent sample indicated 0.6 mg/l of chlorine.
03 A followup sample at the site boundary indicated 0.5 mg/l. Technical
04 Specifications Appendix B limits chlorine to 0.2 mg/l at the site
05 boundary. Dilution flow was increased to reduce the chlorine concentration
06 to meet the specification.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
10 Normal dilution was not being utilized at the effluent. The Cl⁻ concentra-
11 tion of the blowdown was already at the upper limit of 0.2 mg/l and unable
12 to provide adequate dilution when the sewage system discharged to the
13 effluent. A continuous flow of dilution water will be instituted to pre-
14 vent recurrence until blowdown Cl⁻ is low enough to provide ample dilution.
