Docket Nos. 50-329/330

MEMORANDUM FOR: D. B. Vassallo, Assistant Director for LWRs, DPM  
THRU: T. M. Novak, Chief, Reactor Systems Branch, DSS  
FROM: G. R. Mazetis, Section Leader, Reactor Systems Branch, DSS  
SUBJECT: FIRST ROUND QUESTIONS - MIDLAND PLANT UNITS 1 AND 2

Plant Name: Midland Units 1 & 2  
Docket Numbers: 50-329 & 50-330  
Milestone Number: 05-21  
Licensing Stage: CL  
Responsible Branch: LWR-4  
and Project Manager: D. Hood  
Systems Safety Branch Involved: Reactor Systems Branch  
Description of Review: Round One Questions  
Requested Completion Date: February 10, 1978  
Review Status: Incomplete

EG&G Idaho has reviewed the applicant's FSAR through Amendment 38. The enclosed request for additional information includes several RSB questions and is the major result of the EG&G review; however, several additional questions submitted by EG&G are still under discussion by RSB. These questions (approximately twenty) will be completed shortly. The applicant has not yet provided responses to six of the RSB acceptance review questions. The review of this material may generate additional questions.

Also, since RSB participation in the review was limited due to a shortage of manpower, we would expect that our closer involvement at the Round Two stage would result in some additional questions. We hope to accommodate the additional time which will be necessary on Midland by a shortened review cycle on the Erie Station, thereby benefiting indirectly from the Standardization program.
