14 March 1979

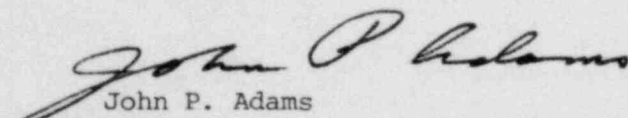

Mr. Harold R. Denton
Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Denton:

It was a pleasure discussing with you on 12 March 1979 our Topical Report BJNPQ-101, "Performance and Safety Features of the Byron Jackson Primary Reactor Coolant Pump and Light Water Reactors." As we advised, it is our plan to file additional documents within a month to be incorporated in the original report. These documents relate to the nuclear steam supplier systems of Combustion Engineering, Inc., and General Electric Company.

As we stated during our meeting, it is our hope that this will receive prompt attention by the Nuclear Regulatory Commission. We believe this this program is supportive of the Commission's standardization policy and contributes to a healthy and competitive industry.

Sincerely,

John P. Adams
President
