December 7, 1979

Director
Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Sir:

Subject: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Fire Protection - Communications

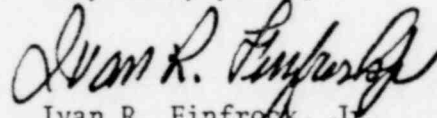

In response to the telephone conversation on November 9, 1979 between J. Knubel of JCP&L and Mr. H. George of your staff, the following information is provided:

In order to provide effective communications between the control room and all safety related areas of the plant, JCP&L Company plans to install a repeater/base station communications system by September 30, 1980.

A test will be conducted during our 1980 refueling outage to determine the compatibility of the proposed system frequencies with safety system instrumentation.

Additional design details of the proposed system will be provided as they become available.

Very truly yours,

Ivan R. Finfrock, Jr.
Vice President
