Docket No. 50-346

License No. NPF-3

Serial No. 576

January 16, 1980

Mr. Darrell S. Eisenhut, Acting Director
Division of Operating Reactors
United States Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

The NRC letter dated October 10, 1979 indicated that upgraded emergency plans for certain facilities (Davis-Besse Nuclear Power Station being one) should be submitted by January 1, 1980. Toledo Edison's letter of December 27, 1979 forwarded, with other documents, the preliminary upgraded emergency plan for Davis-Besse Nuclear Power Station. (The serial number of the December 27, 1979 letter should be changed from 559 to 571). The same letter also indicated that further revision was expected based on reviews then in progress.

The anticipated Toledo Edison reviews and revisions have been completed. Accordingly, ten (10) copies of the Davis-Besse Nuclear Power Station Emergency Plan are attached and provided for your comment. This revision of the Emergency Plan supersedes in total our previous submittal. Toledo Edison is ready to address any comments you may have regarding this plan.

The intended course of action is still to resolve comments from the NRC's review and site visit, then conduct training to ensure the appropriate degree of familiarity. When these events are completed (probably late spring, 1980) the upgraded plan will be implemented.

Toledo Edison remains available at your request to discuss any aspect of emergency planning.

Very truly yours,

A handwritten signature in black ink, appearing to read "H. Plumer". The signature is written in a cursive style with a long, sweeping underline.
