### 1.0 RADIOACTIVE LIQUID RELEASES

Radioactive liquid releases via the circulating water discharge are summarized for total release and by individual source on a monthly basis in Table 1-1. An isotopic breakdown of the total radioactive liquid release is presented in Table 1-2.

The total radioactive liquid release excluding tritium for this reporting period was 3.77E-1 Curies which included 2.60E-2 Curies of processed radioactive waste and primary coolant system letdown, 3.40E-1 Curies of Unit 1 steam generator blowdown, 1.10E-2 Curies of Unit 2 steam generator blowdown and 1.83E-4 Curies of retention pond effluent. The total tritium release for this reporting period was 436 Curies, which included 428 Curies of processed radioactive waste and primary coolant system letdown, 5.45 Curies of Unit 1 steam generator blowdown, 1.99 Curies of Unit 2 steam generator blowdown, and 1.32 Curies of retention pond effluent. All radioactive liquid releases to Lake Michigan were made through the circulating water discharge.

NOTES: <MDA - Less than minimum detectable activity.

(1) - Data unavailable at report time.

(2) - Total does not include tritium, or alpha.

#### 2.0 RADIOACTIVE AIRBORNE RELEASES

Radioactive airborne releases during normal plant operation are reported by total release in Table 2-1, and summarized by isotope in Table 2-2. The release paths contributing to radioactive airborne releases during this reporting period were the auxiliary building vent stack, Unit 1 containment purge stack, Unit 2 containment purge stack, drumming area vent stack, gas stripper building ventilation exhaust, combined air ejector decay duct exhaust and turbine building ventilation exhaust.

There were five gas decay tank releases during this report period.

2.1 Additions to the Semiannual Monitoring Report, January 1, 1979, through June 30, 1979

The following data which was not available at the time of the report preparation should be added to Table 2-2 in Section 2.0 of the Semiannual Monitoring Report covering the period January 1, 1979, through June 30, 1979.

All gaseous and particulate releases are converted to "<sup>133</sup>Xe equivalent" for calculational purposes using the ratio MPC<sub>Xe-133</sub>/MPC<sub>1</sub>. MPC's for isotopes of iodine and particulate with half-lives longer than eight days are reduced by a factor of 700.

<sup>2</sup> Averaged over one month and based on Xe-133 equivalent.

<sup>3</sup> Annual average Technical Specification limits are 0.2 Ci/sec Xe-133 based on X/Q - 1.5 X 10<sup>-6</sup> sec/m<sup>3</sup>. Maximum Technical Specification limits are 2.0 Ci/sec Xe-133 based on X/Q - 1.5 x 10<sup>-6</sup> sec/m<sup>3</sup>.

4 Expressed as Xe-133 equivalent.

Shipments offsite of soliu waste for burial during this reporting period were as follows:

(1) Involved spent resin

## 4.0 NEW AND SPENT FUEL SHIPMENTS AND RECEIPTS

During this reporting period, a total of 28 new fuel assemblies were received from Westinghouse Electric Corporation for Unit 1. No new fuel assemblies were received for Unit 2. No spent assemblies were shipped from Unit 1 or 2.

## 5.0 RADIOLOGICAL ENVIRONMENTAL MONITORING

Radiological environmental monitoring conducted by Point Beach Nuclear Plant for the period from July 1, 1979, through December 31, 1979, consisted of air filters, gamma dose, vegetation, lake water, well water, milk, shoreline silt, soil, algae, and fish samples collected and analyzed in accordance with Technical Specification 15.4.10.

All measurements obtained this period are well within the normal range, and no unusual results or significant departures from normal were noted.

## 6.0 NON-RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM

In accordance with Amendment numbers 29 and 33 to Facility Operating Licenses DPR-24 and DPR-27 respectively, dated November 4, 1977, the Environmental Technical Specifications for the Point Beach Nuclear Plant Units 1 and 2 were modified to allow temporary suspension of the non-radiological environmental monitoring program pending NRC review of the summary report of the five years of monitoring. As a result, the semiannual report specified by item 16.6.2.a of the Technical Specification is not applicable.

### 7.0 NON-RADIOACTIVE CHEMICAL RELEASES

## 7.1 Scheduled Chemical Waste Releases

Scheduled chemical waste 1 leases to the circulating water system for the period of 07-01-79 to 12-31-79 included 3,217,292 gallons of neutralized clear water waste. The waste water contained 638 pounds of suspended solids and 183,123 pounds of dissolved solids.\* When averaged over the reporting period, these discharges represented 37.79% of the Technical Specification limit for dissolved solids and .277% of the Technical Specification limit for suspended solids.\*\*

The concentration increases of chemical waste in the circulating water system during the period of chemical releases ranged from 4.89 to 7.89 ppm dissolved solids and from 3.14E-04 to 8.45E-02 ppm suspended solids.\*\*

Plant chemical records indicated that the following amounts of chemicals were released in the form of neutralized waste:

Sodium	48,211	pounds
Sulfate	109,536	pounds

- \* Chemical releases calculated are based upon neutralized tank analysis prior to discharge.
- \*\* Based on calculations during times of actual discharges.

## 7.2 Miscellaneous Chemical Waste Releases

Miscellaneous chemical waste releases to the circulating water system from the retention pond for the period of 07-01-79 to 12-31-79 included 11,600,000 gallons of clear water waste. The waste water contained 1,680 pounds of suspended solids and 84,200 pounds of dissolved solids.\* When averaged over the reporting period, these discharges were 2.49% of the Technical Specification limit for dissolved solids and 0.089% of the limit for suspended solids.

Retention pond analysis and plant chemical records indicate that the following chemicals were released in the form of clear water waste from the retention pond.

Sodium	7,689	pounds
Chloride	11,866	pounds
Phosphate	130	pounds

The balance of the dissolved solids were in the form of soluble calcium and magnesium compounds resulting from the plant makeup water cold lime softening process.

\* Chemical release calculations are based on retention pond analyses during the period 07-01-79 to 12-31-79.

## 8.0 CIRCULATING WATER SYSTEM OPERATIONS

The circulating water system operation during this reporting period for periods of plant operation is described in Table 8-1.

## 9.0 LEAK TESTING OF RADIOACTIVE SOURCES

During the reporting period, all applicable sealed radioactive sources were leak tested according to Technical Specification requirement 15.4.12. Results of the leak testing showed no removable contamination greater than 0.005 micro-Curies from sealed radioactive sources.
