U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Re: Wolf Creek Nuclear Generating Station, STN 50-482

Dear Dr. Stello:

The undersigned inquires whether or not the Nuclear Regulatory Commission has knowledge of a void in the concrete of the primary reactor wall, the wall closest to the pressure vessel, which was discovered in mid July, 1979. If so, please advise how the information came to the Nuclear Regulatory Commission's attention, what the dimensions of the void are, what causes were identified for the void and what has been done to repair the same.

As proceedings on the operating license are anticipated in the near future, we will appreciate your prompt response to this inquiry.

Yours very truly,

[Handwritten signature: James T. Wiglesworth]
