

APPENDIX A

NOTICE OF VIOLATION

Baltimore Gas and Electric Company

Docket Nos. 50-317
50-318

Based on the results of an NRC inspection conducted on July 30 - August 2, 1979, it appears that certain of your activities were not conducted in full compliance with NRC regulations and conditions of your license as indicated below. Item A is a Deficiency. Item B is an Infraction, Docket No. 50-318 only.

- A. 10 CFR 19.11, "Posting of notices to workers," requires in part that: (a) Each licensee shall post current copies of the following documents: (1) The regulations in this part and in Part 20 of this chapter; (2) the license, license conditions, or documents incorporated into a license by reference, and amendments thereto; (3) the operating procedures applicable to licensed activities; (b) If posting of a document specified in paragraphs (a)(1), (2) or (3) of this section is not practicable, the licensee may post a notice which describes the document and states where it may be examined. (d) Documents, notices, or forms posted pursuant to this section shall appear in a sufficient number of places to permit individuals engaged in licensed activities to observe them on the way to and from any particular licensed activity location to which the document applies, and shall be replaced if defaced or altered.

Contrary to the above requirements, at the time of the inspection:

- (1) Copies of license numbers DPR-53 and DPR-69 were not posted, nor were they described on any posted notice;
 - (2) Copies of the operating procedures applicable to activities conducted under license numbers DPR-53 and DPR-69 were not posted nor were they described on any posted notice;
 - (3) The posted notice which described 10 CFR 19 and 10 CFR 20 and states where these documents may be examined was posted in only one place and did not adequately permit individuals to observe the notice on the way to and from any particular licensed activity to which the document applies.
- B. The Technical Specifications, in Section 6.11, "Radiation Protection Program" requires:

"Procedures for personnel radiation protection shall be prepared consistent with the requirements of 10 CFR Part 20 and shall be approved, maintained, and adhered to for all operations involving personnel radiation exposure."

8003030 027

The Radiation Protection Manual, developed pursuant to the above, as well as other licensee procedures, require delineation of established airborne radioactivity and contaminated areas with signs, stands, ropes and/or barricades and maintenance of stepoff pads on exiting these areas.

Contrary to the above requirements, on August 2, 1979, steps leading to, and areas on, the lowest level of containment were not delineated as described above even though the licensee representative stated these areas were so contaminated that respiratory protection was required in order to safely traverse these places.
