DOCKET NUMBER
PETITION RULE PRM-50-17

June 22, 1976

Commissioner W. Anders
United States Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Sir:

Objection is herewith given to NRC ruling in Federal Register of June 14, 1976 eliminating public participation in licensing processes under Section 185 (a and b) and Section 5 (b). It is much like saying a tailor makes a coat one size and fits each customer into it somehow. Our country was founded as a republic, if not as a democracy. If the Federal government no longer feels that the average citizen has anything to contribute to their government other than taxes, than end at least the sham, and tell the people that their comments and thoughts are no longer necessary, be they valid or not. Apparently, the NRC's answer to all the unanswered and unanswerable questions relating to nuclear fission is simply not to acknowledge them. The U. S. "advanced" technology cannot produce a car that will run trouble-free and efficiently for 5 years, yet you expect 100% assurance of the most dangerous technology known to mankind yet.

If just by chance, you happen to be wrong, where do the children go?

Sincerely,

Anna E. Wasserbach
Box 2308 W. Saug. Rd.
Saugerties, New York 12477

Acknowledged by card 6/30/76
