Mr. J. P. O'Reilly, Director
Office of Inspection & Enforcement
U.S. Nuclear Regulatory Commission
101 Marietta Street, Suite 3100
Atlanta, GA 30303

Subject: Docket No. 50-302
Licensee No. DPR-72
Ref: RII: SCE
50-302/78-30

Dear Mr. O'Reilly:

We offer the following change to our response dated 29 January 1979 to the apparent Item of Noncompliance in the referenced Inspection Report. We are deleting the following from the Response: "Inasmuch as Florida Power Corporation's Quality Programs Department had approved this vendor's quality program, we did not feel this action to be necessary. However."

The reason for the deletion is that the statement is incorrect. However, activities associated with liquid radwaste processing are not safety-related; therefore, do not require Quality Programs' review and approval.

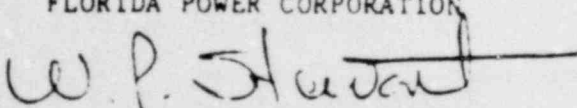

The Response Should Read: It was not our interpretation that Technical Specification 6.8.2 required this vendor's procedures be reviewed by the Plant Review Committee and approved by the Nuclear Plant Manager prior to implementation. Activities are presently in progress to compile applicable vendor procedures into a packet for PRC review and approval. It is felt that the forthcoming review will prevent future recurrence of this Item of Noncompliance.

Full compliance will be achieved by 1 April 1979.

Should there be further questions, please contact us.

Very truly yours,

FLORIDA POWER CORPORATION

W. P. Stewart
