Dear Mr. Hendrie:-

The very idea of putting your stamp of approval on T.M.I. "water plan" is unconscionable without regard to the health and safety of the people of Lancaster County.

By your own admission you admit "processing of the water by mechanical system Epicor II will involve exposing plant workers to radiation and releases of X enon 133 and iodine 131 to the environment." "No system is capable of removing radioactive tritium from the water."

Who do you think you are to pollute our environment?

You should admit you have created an uncontrolable monster and enclose T.M.I. in thick lead forever.

Sincerely
(Mrs.) Ruth S. Gilbert.
