PROD. & UTIL. FAC.

To the Nuclear Regulatory Commission. (Restart)

I am writing to ask your members to oppose the restart of the Unit One reactor at TMI. I feel unsafe here now, knowing that the damaged unit is an unknown danger - I feel that any day it could break down somehow, and another tragedy will begin. If Unit One is restarted, and I am receiving known radiation exposure, I will not know what to do. Last year, I evacuated from my home for two weeks - I was pregnant, and subsequently, I had a miscarriage. I am pregnant again, and I'm praying that all goes well this time. But with the danger of TMI less than 3 miles from my house, I feel very unsure about the safety of me, my husband, and our unborn child. Please do not let TMI reopen - things are already bad enough now.

Thank you,  
Carol A. Rosemeyer
