Mr. J. Werling
Plant Superintendent
Beaver Valley Power Station
P. O. Box 4
Shippingport, Pennsylvania 15077

Dear Mr. Werling:

As part of the BWR pipe crack study, the following individuals will be at the plant on Friday morning, April 25th to tour the areas as indicated. We are providing this information to assist you in planning for the tour and to minimize radiation exposure to the individuals. We expect the NRC individuals to tour as a group with only the key individual entering the indicated areas. The radiation exposure records will be brought to the site on Friday morning since we are unable to have them mailed in time.

Vince Panciera and Tad Marsh - all areas.

Jack Rosenthal - BIT to SI valves 867. C&D. Downstream of charging pumps to 1) normal charging up to containment and 2) normal charging up to SI valves 867 A&B. Optional with time permitting; main steam lines from containment to HSIV.

Richard Lobel - Volumn control tank to charging pumps.

Eileen McKenna - Letdown line from containment to TCV CH143. Suction line from RWST to low lead safety injection pumps. Suction line from RWST to high lead (charging) pump header.

The Beaver Valley licensing project manager, Dave Wigginton is planning to attend but does not plan to tour the higher radiation areas.

On Friday afternoon, the group will meet with Jack Sieber and others to discuss the review. If you have any questions, please let us know.

Sincerely,
