| 0 2 | While performing an air flow surveillance test on the fire suppression system  |
| 03  | sprinkler nozzles to one train of the Supplementary Leak Collection and Release  |
| 04  | System (SLCRS), approximately 50% of the nozzles were found to be plugged. The   |
| 0 5 | consequences to this problem in case of a fire would have been a decreased spray   |
| 0 6 | [flow to the charcoal filter bank. The other train of the SLCRS was available for  |
| 0 7 | service throughout this incident.  |

| 10  | CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27) [Samples of the material clogging the spray nozzles were obtained and analyzed;  |
|     | about 50% of the debris clogging the nozzles was found to be rust and the rest of  |
| 1 2 | the material has not been identified. The nozzles will be removed and cleaned and  |
| 13  | the system blown down with air to remove any rust particles. The other train of  |
| 14  | ventilation will be tested when this train is returned to service.   |
